VENKATA KALYAN BAVISETTI

Hyderabad, Telangana | +91 7981614602 | bavisettikalyan109@gmail.com
Portfolio: https://kalyan-bavisetti.netlify.app/

SUMMARY

Senior .NET Engineer with 4+ years of experience designing, developing, and maintaining scalable web applications and services. Strong in ASP.NET Core, C#, Entity Framework Core, Dapper, RESTful APIs, and WCF services, with deep backend and SQL Server expertise, including query optimization and Ingres-to-SQL Server migrations. Well-versed in MVC architecture, Dependency Injection, and authentication mechanisms such as OAuth2, JWT, Identity Server, and Active Directory. Familiar with front-end technologies like JavaScript and jQuery. Strong problem-solver who thrives in Agile/Scrum environments with clear communication and collaboration.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET Core, ASP.NET Core, ASP.NET MVC, LINQ, Entity Framework Core (EF Core)

Web Development: RESTful APIs, WCF Services, MVC, Razor Pages

Frontend: HTML, CSS, JavaScript, jQuery

Databases: SQL Server, Ingres, MySQL

ORMs & Data Access: Entity Framework Core, Dapper, ADO.NET

Networking & Security: HTTP, HTTPS, TCP/IP, WebSockets; OAuth2, JWT, Identity Server, Active Directory, RBAC

IDE & Tools: Visual Studio, VS Code, Cursor, Antigravity, Postman, Swagger

Version Control: SVN, Git, GitHub

Testing: xUnit, Postman, Manual Testing

PROFESSIONAL EXPERIENCE

Varsun Information Technology Pvt Ltd

Sr. .NET Engineer | March 2022 – Present | Hyderabad

Roles and Responsibilities

- Design, develop, and maintain scalable web applications, RESTful APIs, and WCF services using ASP.NET Core, ASP.NET MVC, and C#.
- Implement secure authentication and authorization using OAuth2, JWT, Identity Server, Active Directory, and role-based access control (RBAC).
- Apply MVC architecture, Dependency Injection, and layered design to improve code structure, testability, and maintainability.
- Manage SQL Server databases: write and tune stored procedures, queries, and indexes for faster data retrieval and storage.
- Lead Ingres-to-SQL Server migrations by converting database-specific SQL and moving ADO.NET/ODBC access to Dapper, while keeping existing business logic and API behavior intact.
- Improve application performance through caching, asynchronous processing, and optimized data access.
- Design and document API specifications with Swagger and Postman to support front-end and third-party integration.
- Collaborate with front-end, QA, and business teams to troubleshoot integration issues and ensure smooth data flow between systems.
- Write unit tests with xUnit, perform API and manual testing, and validate releases against test databases.
- Provide ongoing production support, bug fixes, and enhancements; take part in code reviews and Agile/Scrum ceremonies.
- Use AI-assisted development tools (Cursor, Antigravity) to speed up coding, refactoring, and debugging.

PROJECTS

R1403 – Ingres to SQL Server Migration (AQMD Rule 1403)

Migration of the SCAQMD Rule 1403 application's database operations from Ingres to Microsoft SQL Server without breaking existing functionality. *Stack: C#, ASP.NET MVC, WCF, ADO.NET, Dapper, SQL Server.*

- Converted Ingres-specific SQL to SQL Server syntax, including null handling (IFNULL to ISNULL/COALESCE), pagination (LIMIT to TOP or OFFSET/FETCH), and date functions.
- Migrated ADO.NET/ODBC database interactions to Dapper and added provider-specific connection configuration so Ingres and SQL Server both work through the existing data-access architecture.
- Kept database-specific changes inside the Data Access Layer to avoid touching unrelated application modules.
- Completed migration of the Payment tab; identified and began the FIN WCF service migration.

- Tested the migrated application against the SQL Server test database (xdbcir_test), preserving existing workflows and API behavior.
- Added Google Address Validation via a /utilities/address/validate endpoint: default RegionCode to US, USPS CASS enabled for US addresses only; configured TLS 1.2 for ArcGIS.

AQMDCore API – RESTful API (.NET Core)

Core RESTful API services supporting AQMD business operations and data management. *Stack: C#, .NET Core, REST API, Entity Framework Core, Dapper, SQL Server.*

- Developed and maintained RESTful API endpoints for facility, rule and facility information, and user and application access.
- Implemented authentication and authorization to ensure secure access to API resources.
- Optimized API performance with caching strategies, reducing response times and improving scalability.
- Documented API specifications with Swagger and Postman, and handled testing, bug fixes, and enhancements.

AQMDCore API SQL – Ingres to SQL Server Migration

Migration of AQMDCore API database operations from Ingres to SQL Server while preserving existing API functionality. *Stack: C#, .NET, REST API, Dapper, SQL Server.*

- Converted Ingres-specific SQL, date functions, and null handling to SQL Server-compatible equivalents.
- Updated database access logic to Dapper-based operations and configured SQL Server provider connections.
- Kept database-specific changes in the data-access layer, preserving existing endpoint behavior and business logic.
- Tested and validated migrated database operations and API endpoints against SQL Server.

AQMDCore WCF Services

WCF services supporting AQMDCore business operations and integration with dependent applications. *Stack: C#, WCF, ADO.NET, SQL Server.*

- Developed and maintained WCF service contracts and operations used by AQMD applications for data exchange.
- Handled service configuration, bindings, and endpoints; supported integration with web applications and APIs.
- Provided ongoing support, bug fixes, and enhancements to keep service behavior stable.

ENFORCE – Web Application and RESTful API (.NET Core)

- Built and optimized a web-based enforcement application that improves case management and workflow automation.
- Designed secure REST API endpoints, implemented RBAC, and integrated an external multi-channel notification system with CRUD operations.
- Improved performance with caching, asynchronous processing, and efficient patching mechanisms.
- Produced comprehensive API documentation for developers and third-party integrations.

GMS – Grant Management System

Grant and contract workflows covering funding, award-amount validation, equipment allocation, and invoice processing.

- Enhanced grant and contract workflows, including equipment funding allocation, award-amount validation, and invoice processing.
- Supported the system's funding, contract, and invoice modules.

ATS – Agenda Tracking System (.NET Core)

- Developed a system to manage meeting schedules, agendas, and document workflows, improving team coordination and productivity.
- Designed user-friendly interfaces for scheduling, document upload, and collaboration.
- Optimized database queries for efficient data retrieval and storage; integrated RBAC to protect sensitive information.
- Provided ongoing maintenance, enhancements, and bug fixes.

OrgForms – Customizable Organization Forms (.NET Core)

- Developed a customizable form builder that lets organizations create, modify, and manage dynamic forms.
- Integrated RBAC for secure data handling and improved backend performance using Entity Framework Core.
- Enhanced data collection with file upload functionality and robust validation.

EDUCATION

- **B.Tech** – NRI Institute of Technology, 2021
- **Intermediate** – S.V.L Junior College, 2017
- **SSC** – Z.P.H.S, 2015
